MOVO-X

OIL & GAS / COMPANY BROCHURE

Every worker, every shift, accounted for.

Self-service gate check-in, workforce visibility and timesheet-to-payroll preparation.

MOVO-X develops self-service kiosk hardware and software, live dashboards and remote device management. Our Johor-based team brings these building blocks to a proposed Oil & Gas workforce pilot.

> Oil & Gas workflows are demo-ready, using simulated workers and sample data. Deployment begins with a site-specific pilot; this brochure does not describe an existing O&G production installation.

Built and supported from Johor.

01 / THE WORKFLOW

One arrival. A connected record.

Replace repeated manual entry with a proposed workflow from worker identity to approved hours.

01 / Identity

Badge, MyKad NFC, QR, fingerprint or face, configured for the site. Reader availability and matching are verified during the pilot.

02 / Competency

Check role-specific certificate expiry before the shift. Route a failed check to the agreed HSE or supervisor process.

03 / Safety

Record the worker's pre-shift checklist acknowledgement with timestamps. Checklist content is agreed with your HSE team.

04 / Attendance

Clock in, clock out and record breaks. Review missed punches and exceptions before hours are approved.

05 / Muster

View on-site headcount by gate, employer and crew. Validate list accuracy with a site drill.

06 / Payroll

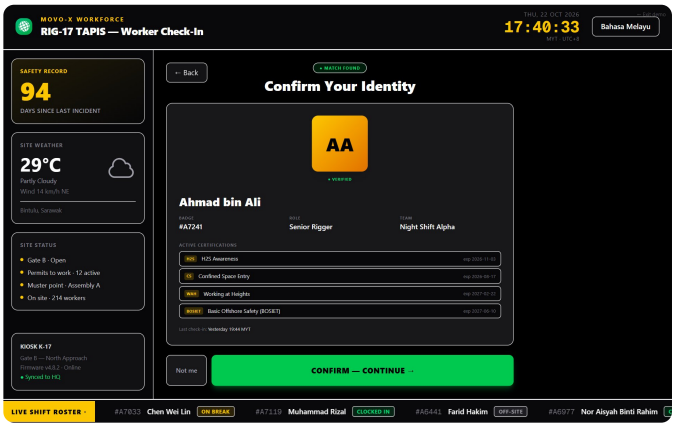

Export approved hours. Optional payroll calculations, bank files and HR/ERP integration are separately scoped and validated.

Try the worker check-in: movo-x.com/demo/oil-gas

02 / PRODUCT VIEWS

See the product before a pilot.

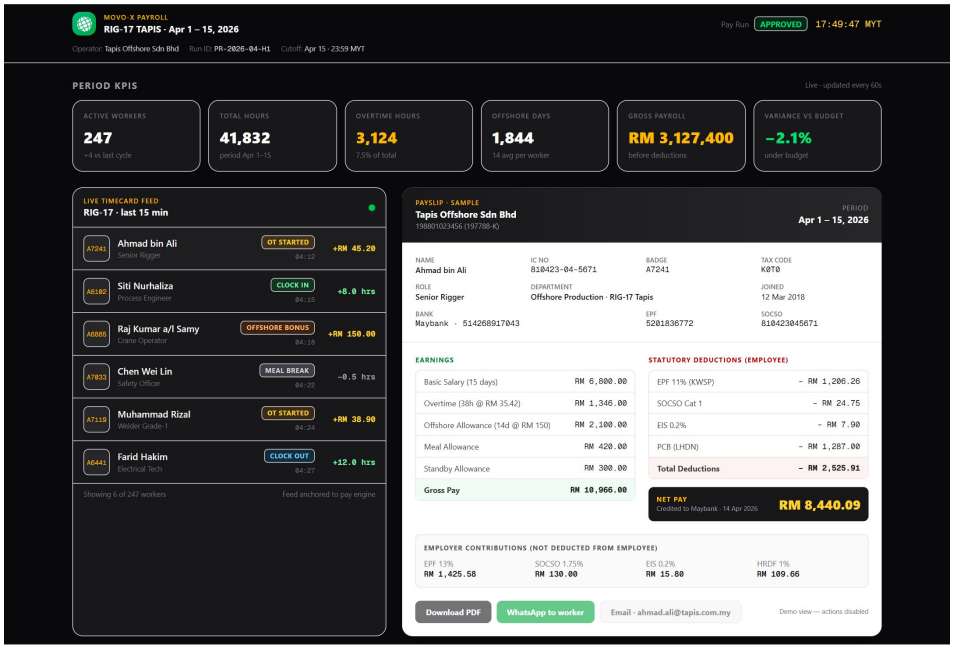

Certificate review

Sample worker, role and certificate expiry checks.

Clock-in confirmation

Sample completed shift check-in and receipt.

Supervisor and payroll view

Review attendance, exceptions and a sample payroll run. Demonstration data is fictional; export targets do not establish active third-party integrations.

03 / DEPLOYMENT

Start at one gate. Measure it.

Who it serves

HSE reviews certificate exceptions and safety acknowledgements. Operations sees gate activity and headcount. HR and finance review attendance and approved hours. Contractor coordinators see crews by employer.

Site survey and configuration

Agree the gate location, hardware/readers, network and power, worker data, certificate types, shift patterns, checklist content and responsibilities. Initial placement is in a non-hazardous area.

Pilot and acceptance

Run alongside the current sign-in process. Measure check-in time, shift-change queues, certificate refusal logs, muster accuracy, availability and timesheet variance. Targets and pilot duration are agreed before go-live.

Commercial options

Pilot: one entry point. Site: additional gates and contractor reporting. Multi-site: group reporting and scoped integrations. All prices are Custom, subject to survey and written quotation. Payroll modules and interfaces are optional scope.

Hardware and data

Supply and commissioning follow the site survey. No Ex/ATEX hazardous-zone certification is claimed. Agree access roles, data retention, hosting, backups and support terms before launch.

> The complete proposed scope and acceptance process are in the consolidated proposal. Healthcare deployment evidence is supplied in a separate reference sheet.
